

Manx Telecom selects Tango Telecom's virtualised iAX™ SCP.

Tango Telecom's solution enables operator to leverage the cost and resource efficiencies of a fully virtualised solution.

Limerick, Ireland, 25th February 2015: Tango Telecom, (www.tangotelecom.com), a leading provider of Data Monetisation Solutions, today announced that Manx Telecom has selected Tango Telecom's virtualised iAX™ SCP to enable the rapid monetisation of its voice, messaging and data services for all access networks, services, devices and payment methods. The contract is part of a joint Cerillion Technologies / Tango Telecom project to transform Manx Telecom's infrastructure to support fully convergent services while leveraging the cost and resource efficiencies of a fully virtualised platform.

Tango Telecom's iAX™ SCP provides a scalable and robust solution to the challenge of charging in real-time for mobile services through real-time service metering and control. It enables operators to aggressively respond to market changes by dramatically reducing time to revenue for new services, plans and promotions. The Tango Telecom solution is fully virtualised, offering Manx Telecom the ability to benefit from the many advantages of network functions virtualisation (NFV).

"Working with Tango Telecom and Cerillion offers us the ability to maximise customer satisfaction and loyalty by significantly improving our subscriber engagement and service velocity. It allows us to offer our subscribers highly innovative and flexible propositions across all services and access networks." says Kevin Paige, CTO, Manx Telecom. "The joint solution is a key enabler for us to differentiate our services and maximise the return on the investments we have made in our fixed and mobile network infrastructure."

About Tango Telecom

Tango Telecom is the leading global provider of Data Monetisation Solutions for evolving mobile networks. Our high performance solutions are deployed at the core of some of the world's most demanding networks including América Móvil, the Axiata Group and the Telenor Group and currently support over 130 live systems serving 650 million subscribers in 40+ countries.

The Tango Telecom Data Retail Engine, the Tango DRE™, drives service innovation and service velocity to successfully monetise the growing demand for mobile data while optimising the use of network resources. Tango Telecom's solutions are fully virtualised and cloud-available globally, enabling operators to benefit today from the many advantages of network functions virtualisation (NFV).

About Manx Telecom

Manx Telecom is the leading communication solutions provider on the Isle of Man, offering a wide range of fixed line, broadband, mobile, and data centre services to businesses, consumers and the public sector on the Isle of Man as well as a growing portfolio of innovative hosting and "Smart SIM" solutions to off-Island customers. About Cerillion

[Cerillion](http://www.cerillion.com) is a leading provider of billing, charging and customer management systems with more than 20 years' experience delivering its solutions across a broad range of industries including the telecommunications, finance, utilities and transportation sectors. These are used to price and bill subscriptions and variable usage for wholesale, retail and white label services; B2B and B2C offerings and multi-country service provider portfolios.

Cerillion Skyline combines this heritage of providing high performance billing and transaction processing engines with an intuitive online user interface to provide a complete Software-as-a-Service (SaaS) billing application for the next generation of digital and non-digital services. Scalable to support from a few thousand to many millions of subscriptions in any industry, Cerillion Skyline comes in four pre-packaged editions and is available for both public cloud and private cloud deployments.
